

Lab 8 Manage User

1. Continue from the previous project.
2. Create a Web Form as shown in Figure 1 and named it as **manageUser.aspx**.

Manage Member Profile

1 Id = uname
2 Id = fname
3 Id = lname
4 Id = gender
5 Id = country
6 Id = email
7 Id = pwd

3 labels with Id = svfName, errMsg and usertype

These labels are used for greeting, feedback and programming purposes.

Figure 1: Manage Member Profile Page

3. Double click at the empty space on the page and type in the following code in the **class Page_Load** (see Figure 2) :-

```
protected void Page_Load(object sender, EventArgs e)
{
    if (Session["firstName"] != null)
    {
        svfName.Text = "Hi," + Session["firstName"].ToString();
    }
    else
    {
        Response.Redirect("login.aspx");
    }

    SqlConnection con = new SqlConnection(ConfigurationManager.ConnectionStrings["ConnectionString"].ConnectionString);
    con.Open();
    if (!Page.IsPostBack)
    {
        SqlDataAdapter da = new SqlDataAdapter("select * from userTable where usertype = '" + usertype.Text + "'", con);
        DataTable dt = new DataTable();
        da.Fill(dt);
        uname.DataSource = dt;
        uname.DataTextField = "username";
        DataBind();
    }
}
```

Figure 2: Data binding

View Record

4. To view the member's record by **username**, double click the *dropdownlist (uname)* and type in the following code as shown in Figure 3:-

```
protected void uname_SelectedIndexChanged(object sender, EventArgs e)
{
    SqlConnection con = new SqlConnection(ConfigurationManager.ConnectionStrings["ConnectionString"].ConnectionString);
    con.Open();

    SqlDataAdapter da = new SqlDataAdapter("select * from userTable where username = '" +
        + uname.Text + "'", con);
    DataTable dt = new DataTable();
    da.Fill(dt);

    fname.Text = dt.Rows[0][1].ToString();
    lname.Text = dt.Rows[0][2].ToString();
    gender.SelectedItem.Text = dt.Rows[0][3].ToString();
    country.Text = dt.Rows[0][4].ToString();
    email.Text = dt.Rows[0][5].ToString();
    pwd.Text = dt.Rows[0][7].ToString();
}
```

Figure 3: Display record dynamically

Update Record

5. Double click at the **Save** button on the page and type in the following code in the *class Button1_Click* (see Figure 4) : :-

```
protected void Button1_Click(object sender, EventArgs e)
{
    SqlConnection con = new SqlConnection(ConfigurationManager.ConnectionStrings["ConnectionString"].ConnectionString);
    con.Open();

    string query = "update userTable set fname = '" + fname.Text + "',lname = '" + lname.Text
        + "',gender = '" + gender.Text + "',country = '" + country.Text
        + "',email = '" + email.Text + "',password = '" + pwd.Text
        + "',usertype = '" + usertype.Text + "' where username = '" + uname.Text
        + "'";
    SqlCommand cmd = new SqlCommand(query, con);
    cmd.ExecuteNonQuery();

    con.Close();
    Response.Redirect("manageUser.aspx");
}
```

Figure 4: Update record

Manage Member Profile

UserName:	jasmin ▼
First Name:	Jasmin
Last Name:	Faizal
Gender	M
Country:	M vietnam
Email:	jasmin@gg.com
Password:	5566
Save	Remove

Figure 5: Missing value for dropdown list

6. To fix the issue in Figure 5, please check the **Enable AutoPostBack** for gender (dropdown list) as shown in Figure 6.

Manage Member Profile

UserName:	Unbound ▼
First Name:	
Last Name:	asp:DropDownList#gender
Gender	F ▼
Country:	
Email:	
Password:	
Save	Remove

DropDownList Tasks
[Choose Data Source...](#)
[Edit Items...](#)
☒ **Enable AutoPostBack**

[errMsg] member [id]

Figure 6: Setting for dropdown list (Id = gender)

7. Add the name space as shown in Figure 7.

```
using System.Web.UI.HtmlControls;
using System.Web.UI.WebControls.WebParts;
using System.Xml.Linq;
```

Figure 7: Required namespace for dropdown list

8. Double click the dropdown list (Id = gender) to create the *class* **gender_SelectedIndexChanged** as shown in Figure 8.

```
protected void gender_SelectedIndexChanged(object sender, EventArgs e)
{
    ListItem li = new ListItem();
    li.Text = "F";
    li.Value = "F";
    gender.Items.Add(li);
}
```

Figure 8: Add item to dropdown list

9. **Save > Build Solution > Run login.aspx** to test it. It should look like Figure 9.

Figure 9: Dropdown list with added item

Delete Record

10. Type in the following code in the *class* **Button1_Click** as shown in Figure 6:-

```
protected void Button2_Click(object sender, EventArgs e)
{
    SqlConnection con = new SqlConnection(ConfigurationManager.ConnectionStrings["ConnectionString"].ConnectionString);
    con.Open();

    string query = "delete from userTable where username = '" + uname.Text + "'";
    SqlCommand cmd = new SqlCommand(query, con);
    cmd.ExecuteNonQuery();

    con.Close();
    Response.Redirect("manageUser.aspx");
}
```

Figure 10: Delete Query

11. **Save > Build Solution > Run login.aspx** to test it.
